Price	EURO 46.00
Category	Anti-Topspin

Speed	67
Control	85
Disruptive effect	95

Both A-B-S and ANTI SPECIAL are decisively slower than our Anti-Spin rubbers GORILLA and GRIZZLY.

Both rubbers offer a much better control and produce a good spin reversal. Especially A-B-S enables a highly effective blocking game since it is a bit slower than ANTI SPECIAL.

At the same time they enable aggressive pushing and lifting, especially on chopped balls.

Both A-B-S and ANTI SPECIAL have a new rubber formula for the topsheet and a new type of sponge. Thus the rubbers come very close to our old frictionless long pimples.

The 1.2 version is the slowest in both cases and hence the most effective for short blocking close to the table. The version with 1.5 sponge is slightly faster and thus a bit more effective for attacking. The 1.8 version enables both good blocking and most of all attacking.

As to GORILLA please note that the new version with 1.2 and 1.5 dampening sponge is much slower and offers a much better control than the versions with 0.6 and 1.0 sponge.

GRIZZLY is still our Anti-Spin rubber that provides the best attacking possibilities . However it is not easy to control and requires a lot of practise.

The new version of GRIZZLY with 'A-B-S' dampening sponge offers both a very good spin reversal and a very good control. On top of that the rubber enables aggressive pushing and lifting.
